

## Mill Steel Co. Opens Facility in Houston, Texas

GRAND RAPIDS, MI (June 20, 2017) – [Mill Steel Co.](#), one of the nation's largest distributors of flat-rolled carbon steel, expanded its operations and geographic presence with the opening of a new facility in Houston, Texas.

Mill Steel is now operational with slitting and cut-to-length capabilities in their 100,000 square-foot facility. This premier building houses three production lines with the capability of slitting 50,000 lb. master coils up to 60" wide and .015-.250" thick. The company plans to add additional production lines in the near future. With these aggressive expansion plans, this will become one of Mill Steel's flagship service centers.

Mill Steel will distribute its entire product line from this new location, including hot-rolled, cold-rolled, painted, and coated steel. It will maintain a large painted product inventory, with a full complement of paint systems and codes. This development will support Mill Steel's construction, automotive, oil country tubular goods (OCTG), agriculture and HVAC business in the Southern United States and Mexico. Furthermore, the geographic advantages and strategic proximity to the Port of Houston will enhance Mill Steel's distribution efforts.

"The addition of this location represents Mill Steel's entry into the significant Southern United States market and furthers our customer and product diversification", said Mill Steel Chairman and CEO, David Samrick. He continues, "We are very pleased to enter this robust commercial territory, which allows us to grow and support our existing customer base."

Mill Steel Co. has been a member/owner of the North American Steel Alliance, [www.steelalliance.com](http://www.steelalliance.com) ("NASA") since 2002. As a part of NASA, Mill Steel has been able to capitalize on its independent advantage on behalf of its customers while strengthening its relationships with the NASA supplier community.
