

Transview Logistics ([Learn more here](#)) is a software company providing web-based transportation and ERP solutions for metal service centers across North America.

Transview's transportation management system **Glass Steel TMS** works with your existing ERP to suggest optimized loads, identify and bid common carriers, and track trucks using onboard GPS. Modern software for modern service centers, typical **Glass TMS** clients can expect a **15% reduction in freight costs for every ton shipped**.

Transview creates value for metal service centers through:

- **Deep knowledge of the metals service center business**  
Transview's products were specifically designed for service centers. Our founder and managing partner began his career at a NASA member/owner company and knows the service center industry inside and out.
- **Optimized transportation algorithms**  
By using modern artificial intelligence to develop loads and routes, Transview clients ship more tons per truck, drive fewer miles, pay fewer hours, and spend less time, wasting money in traffic.
- **Common Carrier Bidding**  
By providing a bidding marketplace for common carrier loads – common carriers bid down route prices for your inbound and outbound transportation needs.
- **Experience with NASA member companies**  
NASA member companies are already our clients. Our size, scope and experience are perfectly aligned with NASA member companies.
- **Already integrated with most ERPs**  
Transview has existing integrations with Eniteo, Compusource (MCMS), Stratix, and Legacy A/S400 ERPs.

**Transview** offers a free back-test where they optimize your historical shipping data and show how optimal routes would have resulted in fewer trucks shipped and fewer miles driven. Let them do the work and prove how optimization really works!

**Transview Logistics** joins *North American Steel Alliance* following an introduction of their system and its impact within **Service Steel Warehouse**, a NASA member/owner company headquartered in Houston, Texas. The Transview transportation management system was presented as a “best practice” at NASA’s Fall Conference. TVL’s client base includes several other NASA metal service centers and metal suppliers.
